

Increase office efficiency, reduce costs related to the use and storage of paper, eliminate lost files, simplify compliance with records retention rules, and ensure data security—with halFILE.

Continuing to conduct business with paper alone has serious drawbacks: lowered productivity due to time spent searching for documents, escalating administrative and storage costs related to copying, faxing, and storing files, the inability for multiple people to access documents simultaneously, and the difficulty in quickly producing records on demand, to name just a few examples.

When electronic files are added to this situation it becomes even more complicated. Attempting to keep track of both paper and digital documents related to the same client soon becomes a frustrating experience.

The solution for this ever-growing problem is halFILE™ Document Manager. Combining ease of use, solid dependability, scalability, extensive security features, powerful system expansion options, and the ability to interface with existing mainframe or legacy systems, halFILE provides everything required to capture, store, retrieve, deliver, and safely preserve virtually any document.
