

Search Module

- On the search hit list, reference documents are now placed immediately below the original doc, instead of at the end of the list
- A check box is provided to turn off the auto view reference feature
- Copy and paste base edit information from the search screen to the Index screen
- Optional transaction logging of index activity
- Large pop-up tables are cached so they come up much faster
- For reports, a schema.ini file is written to identify field types and lengths in order to streamline the report design process
- You no longer have to have administrator privileges to save the hit list grid format
- A new Tools-Option menu is available to configure custom search settings such as hit list color coding, search execute, cross name search, and more
- You can now print brief reports showing only what is on the hit list
- New hit list option shows data matching the criteria instead of the first row of multi-entry data for the document

Index Module

- Index a selected document from the Basket Status screen
- Handles indexing w/o an image so user does not have to clear basket
- You can now identify a basket as a "no image" basket
- Copy and Paste Base Edit information from the Search screen to the Index screen
- Better warning message is provided when user types in more characters than the field allows
- On the Subdivision Base Edit form, after keying in the sub/block/lot, the block/lot level comments are shown in the comment box
- New Tools-Options menu for custom index module settings such as IndexExecute, IndexMenuExecute, IndexLoadExecute, E-mail Notifications, and AutoFillOverwrite
- Optional transaction logging of index activity
- Large pop-up tables are cached so they come up much faster
- Supports new feature where baskets can be assigned to a user
- New OCR-Page-To Field and OCR-Document-To Field menus to store OCR results in memo field

- New hit list option shows all data for a document on the hit list
- Append searches are identified by "Search #" row
- Cross name search identified by "Search #" row
- Allow update of card report option on edit report
- Identify missing image documents
- Send e-mail of marked document information
- Starter Searches
- New OCR_Selected_Clipboard option
- Send to halTRACK.com feature
- Re-Import feature now handles Associated Documents as well as images
- Re-Import menu now has two sub menus: Document only and Document and Data
- Publish hit list and images to HTML or comma-delimited text file
- List Option button moved to Hit List menu and right click menu
- New Hit List-Marked Items-Email-Multiple attachments and -Select pages (old email marked option is now Hit List-Marked Items-Email-One Attachment)

Basket Status Module

- New Tools_Statistics menu shows number of documents in the basket by status
- New File_Transfer menu transfers documents to another basket
- Index button to index selected doc (if user has privilege)
- New Edit_Select menu to select docs by status
- New Tools_Refresh menu to reload basket
- Optional transaction logging for transferring documents, deleting documents
- New OCR_Selected_Clipboard option
- Disabled the document type frame to avoid confusion where user thought document type could be changed
- Restrict the deleting docs - must be an Administrator and have delete privilege for delete buttons to be enabled.
- Gives warning if there are any Index-Complete docs to be deleted

halFILE Manager

- Limited number of license file resets available at update.halfile.com
- Shows only baskets assigned to the user plus baskets that any user can access

halFILE Administrator

- Tools-Options menu is now available to configure custom features
- Easier/faster way to set User Features for all users
- Assign a basket as a “no image” basket
- Assign a basket to a single user or to all users
- New baskets created in standard basket location by default
- New halFILE Update Service is available to go to an ftp site and pull in a description of downloads available and then download programs and put them in place
- File-Database includes new Review Layout button
- Add check box on Configure-Cartridge Screen to “show only cartridges where archive is allowed”
- Administrative Report menu
- Add ability to run Base Edit report from File-Tables menu
- Use 2 reports (Code / Description) instead of one so report title is correct
- On the Auto Fill screen, beneath the Auto Fill Type drop down box, add a check box reading “Perform this auto fill when record is updated in Search”

TWAIN Scan Module

- Prompt when clicking DONE button to prevent inadvertent stapling of all images to one document
- If .tmp files found in folder, user is asked if they wish to import them
- Support for UNC basket paths
- Optional transaction logging of activity
- New Tools-Option menu to configure custom scan features

Kofax Scan Module

- Prompt when clicking DONE button to prevent inadvertent stapling of all images to one document
- If .tmp files found in folder, user is asked if they wish to import them
- Optional transaction logging of activity
- New Tools-Option menu to configure custom scan features

halFILE Image Viewer

- Added Edit-Copy Page menu
- Quadrant zoom from keyboard (alt-1, 2, 3, 4)
- Zoom from keyboard (alt-Z)
- Fit width to bottom of the page (alt-~)
- Default zoom level to fit width
- Ctrl-F (first page), Ctrl-L (last page) from index and search

Archive Module

- Added all baskets option to auto archive configuration screen
- Now support database level as part of folder and expands folder name support to 50 characters
- Archive icon can be disabled when Auto Archive is in use
- Auto archive now configured in halFILE Administrator

Send To halFILE

- The systray icon will be removed in v2.2
- Install now makes registry entries so send to halFILE can happen from the File menu of most applications and Explorer

halFILE Service Manager

- Introduced new module for running halFILE Barcode Recognition Server and halFILE Capture Server

Image Tester

- Add option to delete images smaller than a designated size

Pending Order Module

- Add purge order on Pending Order maintenance screen

Base Edit Module

- Add command line option to print reports (from halFILE Administrator)
- Fix enable of File Reports menu so it is always enabled if a App-Db has been selected
- Use 2 reports (Code / Description) instead of one so report title is correct
- File-Base Edit menu in administrator

AssocImp32

- Added Help menu and Help file

Export32

- Added Tools - Options menu for easier configuration
- Added Help menu and Help file
